

Project Name: Medical Inventory Management

Problem-Solution Fit Template

Identified Problem:

Hospitals struggle to maintain accurate and timely records of medical supplies. Manual methods often lead to data errors, delays in procurement, and the usage of expired products.

Target Users:

Hospital inventory managers, medical store supervisors, and procurement officers who need accurate, automated tools to manage supplies.

Proposed Solution:

A Salesforce-based Medical Inventory Management System that automates stock monitoring, supplier tracking, and purchase order management. It ensures real-time visibility and minimizes manual errors.

Expected Outcome:

Improved operational efficiency, reduced wastage, and enhanced reliability in medical supply management.
